NUTRITISCAN - FICTIONAL RESEARCH NOTE

Software demonstration only. This is not a published study.

Question

How can an agent preserve the source and page of a quotation?

Methods

Eight invented measurements are stored in synthetic-cohort.csv.

The values were constructed for deterministic software checks.

No participants, specimens or biological experiments were involved.

RESULTS - SYNTHETIC SOFTWARE DATA ONLY

The mean signal was 5 in model_A and 12 in model_B.

Seven complete pairs had a Pearson correlation of 1.

One signal value was missing and no values were imputed.

Limitations

These fictional values provide no evidence about cancer or treatment.

A quotation match establishes text membership, not scientific validity.

The third page is intentionally blank to test missing text handling.
